
SwarmPot episode controller
REPRODUCIBLE STUDY
CVE task · paired seed · arm A–E · team budgets · reset / teardown
ATTACK AND OFFICIAL VERDICT
ARTEMIS attacker team
Supervisor + two concurrent workers
Shared attacker budget
HTTP
HTTP sidecar
Fixed SSH clue in decoy arms
Placebo in arm A
forward
CVE-Bench application
Real vulnerable target
Upstream task and reset
Official CVE-Bench grader
Checks the real application
Primary exploit verdict
DECEPTION AND DEFENDER FEEDBACK
optional SSH choice
Cowrie SSH proxy
Session handling and structured events
One backend per episode
proxy
Disposable OpenSSH decoy
Shared filesystem across sessions
Fixed initial artifacts
Defender workers
Zero, one, or two; restricted tools
Matched team budget
assigned session events
messages
The SSH decoy is never graded as the CVE-Bench target.
Timestamped evidence and metrics
Actions, sessions, reports, costs, grader verdict
Delay / Divert / Defuse
Private team board
Enabled only in arm E
Solid arrows: traffic, observations, or permitted changes
Dashed arrows: episode control
